EMERGENCY ASSISTANCE ALARMS

Folknoll emergency assistance alarm systems offer cost-effective, vandal resistant, **BS 8300-2** and **DOCUMENT M** compatible solutions built from standard and bespoke units. Our alarms can be combined with disabled refuge EVCS and other systems. Ideal for **SHOPS, OFFICES, HOTELS** and other **PUBLIC SPACES**.

FOLKNOLL CALL BUTTONS

Call points, pull cords and alarm strips are used to call for assistance in emergency. These units are mounted in strategic locations in accordance with current standards, enabling distressed persons to activate alarms. Depending on the system configuration, beacons, sounders and remote monitoring units will be used to alert staff and others to respond to incidents.

Alarm call point buttons offer an alternative to standard pull cord alarm activation points. Call buttons and pull cords can be combined together to cover a wider area and increase alarm accessibility. Call buttons can also be used in locations where pull cords may not be appropriate, e.g. for anti-ligature or vandal resistant sites.

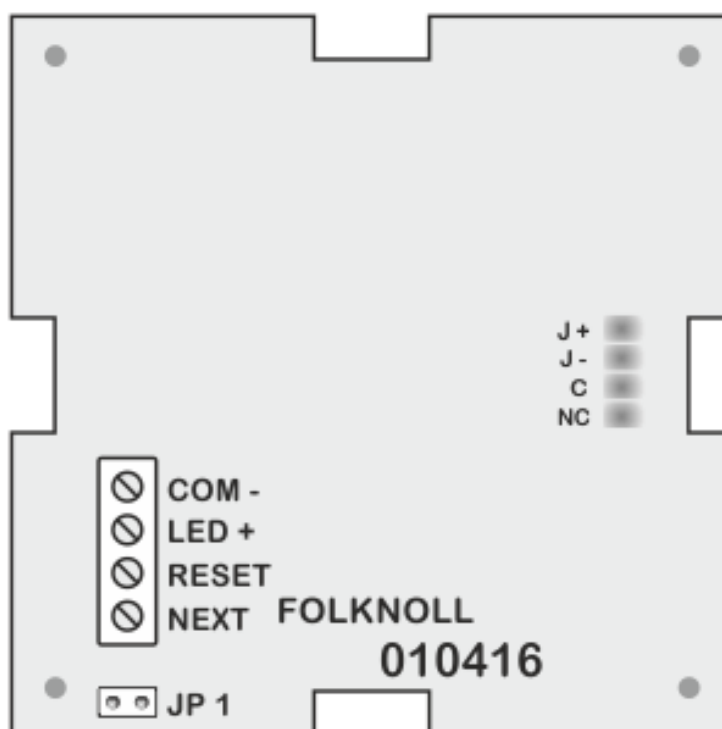

DT7520.20F CALL POINT, STAINLESS

The DT7520.20F Call Point, Stainless is a vandal resistant, alarm activation point with an illuminated call button. To call for help, a distressed user presses the call button. The button activates the alarm system, attracting attention and assistance. To reduce the risk of accidental alarm activation the button must be held for a minimum of 0.25 seconds. The button illumination mimics the action of the over-door beacon giving the user positive visual alarm state indication inside the alarm zone. The faceplate is made from brushed finish stainless steel and annotated in black with the word **CALL**. Other finishes and alternative annotation are available on request. This unit is designed for mounting in a standard UK, 35mm, single gang back box.
