

ILLUMINATED EASY STRIKE ALARM ACTIVATION STRIP SWITCH

Fault monitoring and indication

Larger “reach” covers larger areas than traditional call buttons or pull cords

Range of colours and illuminations

Corners, end pieces, and other fittings for easy wall mounting

Compatible with all Folknoll intelligent affray and emergency assistance alarm systems

INTELLIGENT AFFRAY ALARMS

Folknoll intelligent affray alarms system offers **NOMS** compliant affray alarms for high security sites and **BS 8300-2** compatible emergency assistance alarms for disabled users. We offer a range of alarm activators including call points and alarm-strips.

CALL POINTS AND ALARM STRIPS

Call points, pull cords and alarm strips are used to call for assistance in emergency. These units are mounted in strategic locations in accordance with current standards, enabling distressed persons to activate alarms. Depending on the system configuration, beacons, sounders and remote monitoring units will be used to alert staff and others to respond to incidents.

STRIP ILLUMINATION

The alarm strip illumination is used to indicate alarm status.

When connected to a Folknoll intelligent affray system the following states may be indicated:

STATE	STRIP ILLUMINATION	
Quiescent	On (steady)	Indicates system ready for activation, helps users find strips, deters unwanted activity
Alarm activated	Flashing	Reassures users that alarm has been activated, indicates to others that assistance is arriving and unwanted activity should cease.
Fault	Off	Warns potential users not to rely on the alarm strip system and make alternative provision.

ALARM STRIP PARTS

Alarm strips comprise mounting rail supplied in 2m lengths, coloured insert supplied in 5m lengths and illumination strip supplied in 5m lengths. Also supplied with any system are a mounting rail aligning tool, mounting rail joining pins along with end brackets and other fittings.

UNIVERSAL CONNECTOR

The Universal Connector provides great versatility by connecting strips in-line, around external corners and internal corners and comes ready-wired for LEDs as well as the alarm circuit.

MOUNTING

To make the required length, 2m mounting rails are cut and coupled together using the rail aligning tool and joining pins. The resulting rail is fixed to the wall. The coloured insert and illumination strips are cut and inserted, then the end caps and other fittings are added. There is a separate instruction sheet describing the mounting procedure.

POWER

When attached to a Folknoll system alarm strips and strip illumination are powered by the strip controller.

APPLICATION

Ideal for custodial affray alarms in prisons, Police stations, etc. and emergency assistance alarms e.g., disabled toilets, bathrooms, bedrooms, etc.

ABOUT FOLKNOLL

We are a UK based systems design, manufacturing and installation company. Since 1975 we have been supplying tough, reliable, practical, alarm and control systems for the private and public sectors. All of our products and systems have been designed for easy installation and low maintenance by experienced engineers. As original manufacturers, all of our products and systems can be customised to suit your requirements. We also offer individual annotation, custom engraving and special finishes for all of our equipment.
